

Quote:-

I'd just love to know where you got this 'spray coating on the electrode' from because I don't know of anywhere that it was ever mentioned by Meyer. No doubt you have your secret source, eh? 😊

No secret for me as I have spent more than a week with his estate which is in a private museum in Detroit, and where was I talking about electrolysis? I was not.

Quote:-

I've done many experiments in this area and can tell you that building up even a thick calcium carbonate layer on the cathode will not prevent current flow because, although the compound is an extremely good insulator, on a microscopic level this insulating layer is extremely porous. However, what can happen is that electrons can build up around the microscopic pores of this insulating layer. They build up because they are sometimes unable to physically reach and hence react with relatively, far larger ions and water molecules. **So on a molecular level there comes a point whereby the electrons build to such an extent that extremely high localised voltages are produced, which, in turn, at some point inevitably discharge. This creates tiny localised plasma discharges that not only break down the water molecule into oxygen and hydrogen atoms and molecules and ions, but also other species such as  $H_2O_2$  and radicals such as HO.**

Well what can I say!

**I have been around these forums for a good many years now**, and what many of you do not realise is that certain characters have been playing their games for along, long time. It is a real shame that when people such as **myself and Exn** expose frauds, con-men and charlatans for what they really are, that we are often the ones that are regarded in a bad light.

Yes I think we all know about you, you have been thrown off more forums than we all have had hot dinners, and I have never had anything to do with that even if you think so, I do know that Ron Stiffler did and the likes of you is why he no longer uses **open** forums. Don't "like" yourself to Exn, he is a very knowledgeable person with qualifications, though a little extrovert.

Quote:-

**People need to understand that there are those that thrive in the spotlight, those that pose as authorities on the subject**, those that make all manner of claims and those that will happily take credit for other peoples work. Mike John Nunnerley is one such individual. Over the years I've seen them all come and go. Among the ranks are the likes of Aaron Murakami, Bob Boyce, Tutanka, Alaskastar, H2Opower, Gadgetman, Lindemann, to name but a few. But MJN is right at the top of the pile with Murakami and Lindemann, because not only has he persistently peddled his bullshit, sucking in the pitifully naive and gullible for years now, but he ultimately aims to profit from it.

Are you talking about yourself? What other peoples work have I taken credit for? There are some things you don't know, like working with other people away from forums, where the real work is done and work done **TO MAKE A LIVING FROM COMPANIES AND CONTRACTS.**

Quote:-

**I defy anyone to find even one scrap of useful (or meaningful) information that MJN has ever brought to the party.** I defy anyone to find a post whereby MJN backs up one of his (many) invention claims with any kind of supporting evidence whatsoever. You won't be able to, because Mike steals other

peoples work and other peoples ideas and claims them as his own, the downside of this for him though is that he never fully understands the processes or the concepts. For years he has taken credit for other peoples work, and yet, in fact, actually produced nothing tangible himself. Of course he will tell you different, stating that he has achieved this, that and indeed the other, but it really is just all empty talk with absolutely no substance. If you look hard enough you will find that what he does is lay down a wide variety of snippets of information gleaned from other sources, but claimed as his own, in the hope that, if or when, someone actually produces the goods, he can lay claim to being the originator. He has done this for years and still does. **He claimed that Audi stole one of his inventions, and indeed tried to take some credit for the Kanzius (burning water) discovery, claiming he had in fact done this years ago. He claims he has had patents stolen and that other patents were in fact his work, etc, etc. In fact, over the years he has fabricated a whole elaborate history of claimed inventions - none of which, rather strangely, have ever seen the light of day on any forum.**

No you have never seen anything and that's the way it will remain unless someone else passes on the information or you read it in one of my patents, you can do a search, it is quite easy. <http://www.google.com/patents/EP0385700A1?cl=en> will take you direct to one of my patents which is used all over the world, and has earned a lot of money, oh did I say **money!!!!!!!** I have had the honour to work with some of the greats in industry, but now I am retired and work to try and help to find a solution to mans devastation of our world, it's not an easy task and it does not make it easier with people like you around.

Quote:-

Ask him a technical question about one of his so-called inventions, or ask him even a basic question about the science involved and he is completely flummoxed. His usual response in such circumstances is to 1. Be highly evasive, 2. Completely change the subject, 3. Attempt to belittle the person for asking a 'dumb' question, 4. (the classic fall back) Claim he is restricted by a non-disclosure agreement or a patent-pending, and 5. (the one I love) You will have to figure it out yourself... like I did. ...Yeah, right! Anyway, which ever excuse is deployed, you can be certain of one thing: you will be told nothing of any consequence, you will be shown nothing of any consequence, you will learn nothing from anything he posts, and ultimately be non-the-wiser for the interaction. At some point - provided that you are not one of the super-gullible that will believe anything and everything anyone posts - you will realise that you are being led on a very pointless, merry dance. MJN is quite simply a fraud, and a man that relies heavily - and indeed preys on - the gullible.

**My CV is quite extensive and respected in industry and ministry of industry levels, and what about you? apart from your boasted high IQ, I don't think we will get one, you would have to show who you are and that would not do would it!**

Quote:-

His website is an absolute joke, and clearly exists solely because he hopes to benefit financially from the 'Donations' button. There is nothing of any consequence on his website, just inaccurate information and snippets of the same old rubbish he posts on forums. It is unfinished and it hasn't been updated or added to since its creation in 2008 (rather coincidentally around the same time that the Kanzius discovery came to be public knowledge).

**Yes I agree my web site is a total mess, just don't have time to do anything about it, a bad idea in the beginning. Maybe if I do it all up I might make some money out of it!!!!!! now that's a thought.**

Quote:-

**With me, what you see is what you get.** I work the science and proffer information gleaned from my **knowledge and experience**. I never make unfounded claims, or claim to be anything I'm not. So before you knock me for my bluntness, my **rude ill-mannered post**, ask Mike a few scientific questions about his synthetic fuels or his super efficient SMD electrolysis... and then ask yourself **who should you trust... MJN or myself?**

Yes we see what we get, rude ill-mannered posts and you seem to think you are in competition with me!! don't elude yourself.

Quote:-

If as MJN states, one electrode has to be completely insulated, then this insulation layer becomes the dielectric, the voltage sits across this layer and has no effect on the water which simply becomes a conducting extension of the uninsulated electrode. Water is a very poor dielectric - of course it is, it is a far better conductor than it is an insulator!

Are you talking electrolysis again? I'm not and never was, I think it was to do with seeing discharge in the form of light, or was it not? Yeh you love to manipulate and miss quote in a profusion of high IQ words, it's your trait.

Quote:-

I have stated this many a time, and surely common sense and logic dictates that the voltage will sit across the insulation, not the water - what is wrong with people? Naudin at JLN Labs experimented with this by completely insulating one electrode, and, guess what... nothing happened. I really can't emphasise enough that MJN doesn't have a clue what he is talking about, he is simply doing what he always has done, that is, creating a persona of someone who is an authority on the subject, whilst in reality he is just bullshitting his way through. And I might add, he does this exceptionally well, because he has fooled people for many years with this technique. He does this so well in fact that many of the unscientific and gullible folk out there consider him an authority on a subject that he clearly knows nothing about. Incredible really.

Quote:-

But the crux of the matter, Chet - and clearly something you will never understand - is that it is about science; peoples feelings are largely irrelevant, but especially so when such people are blatant frauds, posturing as authorities. And if you really think I'm being too harsh, then challenge him to show a working heterodyning device that uses RF to dissociate water or his super-efficient SMD electrolyser... or even just get him to explain what it does and how it works. Or ask him how he creates his synthetic fuels and where is he using them...

You forget that Mike is from the same mould and indeed a close buddy of Mystic Murakami, they play the same games, they prey on the same people, they lead folk along winding paths to nowhere, and they defend each other's nonsense with a passion - they are effectively partners in crime. They have all done this for years. I really do not know what he is doing plying his trade here. This forum does not need the likes of MJN to play his games and spread his misinformation - that's what EF is for.

Quote:-

Because of your extremely lacking grasp of science and indeed your inability to see people for what they

really are, it may not be obvious to you Chet, but I can tell almost immediately when someone is posturing. I can tell from what they post and how they post whether I'm dealing with a genuine individual or a clueless someone who is just blagging it for the attention. MJN is and always has been all talk and no substance, and furthermore you will never see anything from him to suggest otherwise.

Ask MJN to show you a fully insulated electrolysis cell producing gas, and see how that goes. And while you're at it ask him where he heard that Meyer sprayed an insulating coating onto his electrodes... cause I don't think he will talk to me.

Enough said I think
