

Lemont Spirit Telegraph

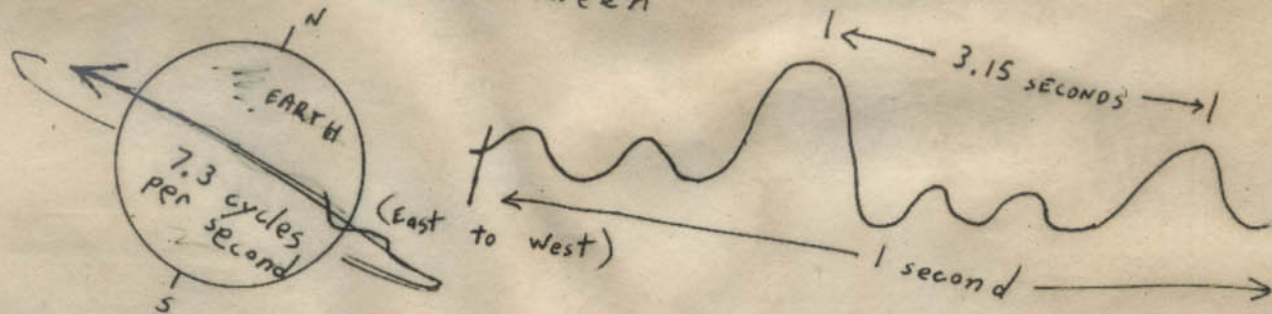

Lo
EST 1941
MOR 17

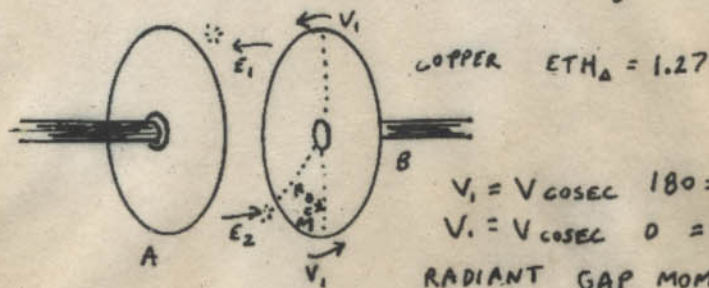

What you see in the box before you is the product of countless years of experiments. It is a device that allows the departed and perhaps no human earth bound spirits communicate with the world of the living. The device is by no means perfect or reliable. Even if careful preparation is done and the machine is in perfect working order there is no guarantee that a spirit will be present to operate the machine. Most clients report the telegraph works best at night, as it is much harder for spirit to manifest when the sun is in the sky. The telegraph works best if the two copper plates are aligned with the east and west directions.

Mr Nikola Tesla discovered that the earth pulses ~~the~~ with electrical energy 7 times per second with the third pulse in the series being 1.27 times transverse to the pulses which fall inbetween

When one of these pulses passes a ground location the earth ground potential is at its peak, during this time lightning has the highest likelihood of discharging from the sky to ground. The spirit telegraph uses this scientific principle in its operation. When the earth energy pulses pass the plates from east to west and the plates are correctly tuned (diameter and gap are of the proper ratio) there is a time window that an unseen spirit may cause a flow of energy from one plate to the other.

Earth Oscillatory current Freq = 7 Hz
 GAP $\leq \frac{1}{2}$ INCH WITH $\frac{7}{8}$ " PISK

$$V_1 = V \cos \theta \quad 180 = -\infty$$

$$V_1 = V \cos \theta \quad 0 = \infty$$

RADIANT GAP MOMENT = 12.57 MCYCLES

E_1 MINIMUM $E_A = 8$ ELECTRON VOLTS

PEEK PULSE RIDGE = $3.15 / 7.3$ HERTZ CYCLES
 0.43 PEEK MOMENT SECONDS

The flow of electric from plate A. to plate B. happens during a peek moment when some sort of ionizing energy bridges the gap reducing the resistance point to near zero.

A spirit being need only manifest a small stand of ectoplasm the thickness of a single strand of spider silk to cause the flow of electric across the plates. A strong spirit may be able to hold this connection for several seconds while lesser spirits may be able to hold the connection during the peek moment in the earth energy flow.

The electric energy will flow (once the plate gap is bridged) through a coil of wire wrapped around an iron core which forms an electric magnet. The electric magnet pulls down on the iron slug in the sounding arm causing the tale-tale click.

You may have to adjust the sounder arm so that you get the proper movement. The sounder arm must be close enough to the iron rod that the magnetic field can pull the sounder arm. About $\frac{1}{16}$ " seems to be the correct distance. The sounder arm has an adjustment screw that can be used to raise or lower the sounder arm to the correct height.

The current flow is exponentially in strength as the expanding magnetic field of the coil CROSSES the air gap at a time segment of matching earth resonance.

Any ionized energy speeding the flow is reenforced, leading to an energy CASCADE.

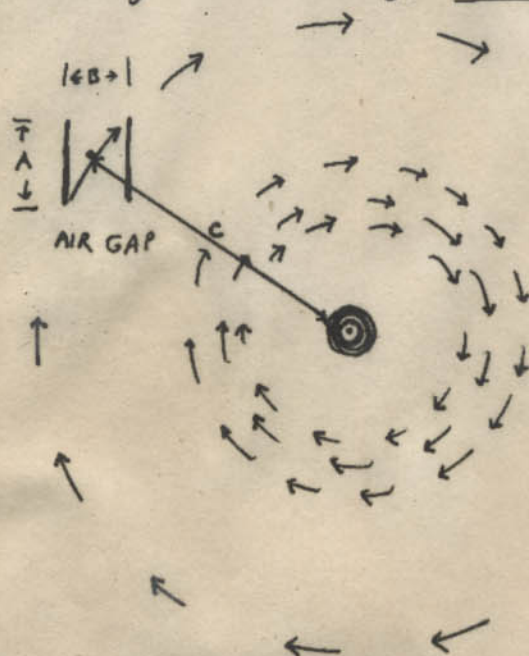

$B = 0.375$ INCHES

$A = 0.875$ INCHES

$C = 2.68$ INCHES

$$\left(\frac{C}{\sqrt{A^2 + B^2}} \right)^2 = 7.3 \text{ CYCLES}$$

spirit telegraph needs to be placed so that the resonate earth pulses pass through the air gap plates at a 90° angle.

Telegraph Operations:

It is best if the people taking part in the experiment remain calm and quiet and keep a feeling of openness and welcoming. The telegraph should be placed in the center of the room on a table with the people taking part sitting in a circle on chairs arranged in a circle.

The spirit telegraph needs to have its air gap plates facing east and west. Candles should be placed at the NW, SE, SW and NE corners of the table. Holding hands, singing or playing a record of music to create a welcoming atmosphere. The telegraph tends to work better at night or at least in a darkened room. The telegraph tends to work better during a full moon.

Adjusting / Testing: make sure your batteries are ~~fresh~~ fresh and the contacts are clean. Place the sounding arm into position. Adjust the sounding arm so that there is about a $\frac{1}{16}$ " gap between the sounding arm and the iron rod.

Make sure you have a live circuit by placing a knife or other metal object across the air gap plates. You should see a sparking. If the sounder arm is in place and ~~proper~~ in good adjustment the sounder will click. If there are no sparks the ~~batteries~~ batteries are dead or the battery contacts are dirty. If there are sparks, but the sounder doesn't move the gap between the sounder arm and the iron rod may be too great and needs to be adjusted to $\frac{1}{16}$ " or less. If the sounder arm is resting on the iron it is too close and needs to be adjusted so that there is a gap of about $\frac{1}{16}$ ".

Once you can short out the air gap plates, see sparks and hear a corresponding click from the sounder arm moving and ~~striking~~ striking the iron rod... you are ready to begin...

Communication:

You may wish to say a short invocation or divine blessing before getting started. Have everyone breath slowly and deeply, clear your mind, calm yourself.

After a few minutes everyone should say together "Any spirits present, we ask you to commune with us and move among us." Repeat this chant until there is a response. The response may be the working of the telegraph, an object moving, or even a sudden chill as the spirit draws heat energy from the room to use to manifest.

If the telegraph become active establish what the spirit wishes to use for YES and NO, most spirits prefer one or more taps for YES and no taps at all for no. Remember to ask only yes or no question of the spirit and only one question at a time.

When you are finished with your questions, be sure to thank the spirit and tell it to go in peace. Then remove the sounder  from the telegraph and wrap it in cloth, then put the sounder away. If left in place the spirit may linger, which could lead to an unfortunate haunting of the room in which the telegraph is kept, or a unwelcome spirit may take over the telegraph.

may you be blessed of the
spirits

John Lemont
